DIRECTIONS FOR USE

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING.

GRAIN TREATMENT: Apply one to two pounds per ton of grain (28 to 56 pounds per 1,000 bushels) during storage to prevent insect damage to grain. For best results, treat grains and seed immediately after harvest. DRYACIDE® 100 provides effective control of stored grain insects, including Granary Weevils, Red Flour Beetles, Rice Weevils, Sawtoothed Grain Beetles, Rusty Grain Beetles, Merchant Grain Beetles, Hide Beetles, Litter Beetles, and Grain and Mold Mites. Direct contact with dust is necessary for control. Use the higher rate for applications to corn. Optimal performance is achieved with low grain moisture. Adjust the moisture content of the grain or seed treated by using aeration to no more than 12% by weight. Thoroughly mix DRYACIDE® 100 with grain. Product may be dispensed into the grain either at the bottom of an elevator leg or as it is being moved into storage by auger or conveyor belt. Seal bin for storage. It is wise to check the status of stored grains regularly.

IMPORTANT: When treating the entire grain mass, treated grain will have a dry appearance; its movement speed may be reduced and the grade and test weight may be lowered. To minimize these effects, a layer treatment is recommended. Milling, baking, nutritive and germination qualities of grain or seed are not affected by this treatment.

LAYER TREATMENT: As an alternative to treating the entire grain mass, apply one to two pounds per ton (28 to 56 pounds per 1,000 bushels), treating only the top 2-3 feet of grain at the time of storage. A mechanical dust applicator is recommended, taking care to achieve even distribution. For best results, combine layer treatment technique with an empty bin treatment prior to storage of grain.

SURFACE TREATMENT: As a top-dressing treatment, apply two to three pounds of DRYACIDE® 100 per 1,000 square feet of grain surface area. For best results, use a surface treatment is recommended in combination with the layer the treatment technique described above. Indian Meal Moth populations are suppressed using this technique. Apply to the surface of grain at the rate of one to three pounds per 1,000 square feet at the first sign of moths. Repeat treatment as necessary for control.

PEANUT (IN SHELL) TREATMENT:

Apply two pounds per ton (28 to 56 pounds per 1,000 bushels), treating only the top 2-3 feet of peanuts at the time of storage. A mechanical dust applicator is recommended, taking care to achieve even distribution. For best results, combine layer treatment with an empty bin treatment prior to storage of peanuts.

EMPTY BIN TREATMENT: Empty bins, bulk grain storage areas, peanut warehouses and storage areas, grain handling equipment and transportation vehicles can be protected from stored grain insects by dusting walls, floors, and other surfaces where insects hide or crawl. Apply at the rate of one to three pounds per 1,000 square feet of surface area, using mechanical dust applicator or power equipment suitable for the application of dusts. Distribute dust evenly and apply thoroughly to cracks and crevices and other areas where insects may hide or crawl. Repeat treatment after grain has been removed from storage. DRYACIDE® 100 can also be applied as a slurry treatment to empty bins and bulk grain storage areas. Mix 1.5 lbs. of DRYACIDE® 100 per gallon of water and apply 1.5 gallons of finished spray per 1,000 sq. ft. Apply evenly for thorough coverage to the point of runoff.
