

PRODUCT FACT SHEET – NATTARO SCOUT

NATTARO SCOUT, is a bedbug trap with patented lure and innovative design. The product is developed and manufactured in Sweden. Use the traps for early detection and ongoing monitoring of bed bug infestations. The lure mimics the natural smell of a bed bug harbourage (aggregation), and attracts both adults and nymphs.

Usage:	Use indoors to capture bedbugs. Always check Best Before Date of lure before use.
Lure, efficacy:	The lure attracts bed bugs for 3-4 weeks in normal room temperature (20-22°C).
Material, trap:	The trap is made of certified GMO-free and biodegradable material.
Material, lure:	Gelling agents, synthetic fragrance materials. The capsule is made of PET.
Material, packing:	Cardboard made of acid-free paper.
Storage, trap:	Store dry and at normal room temperature.
Storage, lure:	Long term storage in a refrigerator (4-8°C). Do not freeze.
Recycling:	Traps with catch are frozen at -18°C for 48 hours. If necessary, clean with water, max 40°C.
Waste disposal:	The outer packaging recycled as cardboard. The trap and lure as combustible residual waste. Empty capsules sorted as plastic.
Warning:	The lure contains synthetic substances that can cause allergic reactions in direct contact, see Material Safety Data Sheet. Keep away from children and pets.

1.

Lure, vacuum packed in a plastic bag with silver film

2.

The trap with a high-gloss inside and rough outside

3.

The holder for the trap

4.

Capsule of PET with protective sticker of plastic film

5.

The white bottom of the trap is opened with a bayonet mount

6.

Fully assembled trap
