

PERMIGAS INSECTICIDE

Permigas is a broad spectrum insecticide in an aerosol formulation for the control of insects in domestic, commercial and industrial premises; management of aphids in greenhouse capsicum and post-harvest control of tropical armyworm in stored kumara sheds.

APPLICATION SYSTEM

Permigas is an insecticide spray applied as a cold dry fog. The insecticide is dispensed by hand-gun for smaller buildings or by a custom built pipeline-dose system for larger structures, which applies accurate doses through nozzles.

APPLICATION RATE

Application	Insects	Application Rate	Treatment Time
Structures: Factories, warehouses, offices, homes, shops	Flying Insects - Flies, moths, mosquitos and most other flying insects	0.17g/m3 Spray into air.	At least 2 hours
	Crawling Insects - Silverfish, cockroaches, ants, and most other insects	0.5g/m3 Spray into air and into cracks and crevices using a Crack and Crevise nozzle.	At least 2 hours
Greenhouse: Capsicum	Aphids	1.2 g/m3. Spray into air. Repeat applications at 10-14 day intervals may be necessary.	4 to 6 hours
Storage Sheds: Kumara	Tropical Armyworm	2 g/m3. Spray into air. Repeat applications at 10-14 day intervals may be necessary.	4 to 6 hours

APPLICATION EQUIPMENT

The automatic or manual spray system is manufactured and supplied by BOC. Other spray equipment recommended and approved by BOC may also be used.

TREATMENT TEMPERATURE RANGE

Between 15° to 20°C.

DIRECTIONS FOR USE

Determine the volume of the structure, and calculate amount of Permigas required for treatment.

Ensure correct spray rate is applied.

Vents should be completely shut when the aerosol insecticide is applied.

The treated structure should be thoroughly ventilated before re-entry.

Withholding Period: 3 days for greenhouse capsicum, 7 days for kumara.

family of environmental gases

READ ALL INSTRUCTIONS BEFORE USE

A penetrating gaseous spray for the control of flying and crawling insects in structures; pre and post-harvest aerosol insecticide spray for the control of aphids in greenhouse capsicum and tropical armyworm in stored kumara.

Active Ingredients	Propellant
4.0 g/kg permethrin 1.0 g/kg pyrethrins 5.0 g/kg piperonyl butoxide in the form of an aerosol	carbon dioxide

Registered pursuant to the ACVM Act 1997, No. P3306
See www.nzfsa.govt.nz/acvm for registration conditions

RESISTANCE MANAGEMENT STRATEGY

To minimise the risk of resistance use a maximum of 4 applications in any one sequence of use, then use another insecticide from a different group for subsequent sequence of sprays.

WARNING

Avoid breathing vapour. Only re-enter treated area after thorough ventilation.

PRECAUTIONS

1. Keep out of reach of children.
2. Beware: Deliberately sniffing or inhaling concentrate spray can be harmful or fatal.
3. Avoid contact with skin or eyes.
4. Avoid breathing spray or vapour.
5. Wear suitable protective clothing: gloves, eye and face protection, including suitable breathing protection such as an organic vapour respirator.
6. Wash thoroughly with soap and water after use or before eating, drinking or smoking.
7. Fully open vents and thoroughly ventilate treated area to ensure the atmosphere has been cleared of the insecticide before re-entry.
8. Wash contaminated clothing before re-use.
9. Avoid contamination of any water supply with the product or used containers.
10. Do not enter the greenhouse or shed while spraying operation is in progress. Observe re-entry period.

FIRST AID

In case of inhalation, remove patient to fresh air, lay patient down, keep warm and rested and seek medical attention immediately. For advice, contact the National Poisons Centre (0800 POISON / 0800 764 766) or a doctor immediately.

STORAGE

Store all containers in a cool place out of the sun. Return empty containers to your nearest BOC Limited Gas & Gear branch or gas agent. Expiry: This product expires 2 years from production date as specified on Cylinder Batch Tag.

All containers are the property of BOC Limited.
