

Xlure MST

Russell IPM is proud to present its most innovative multi- species trap for monitoring stored product crawling insects.

1

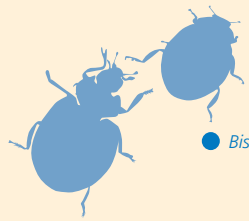

360 Degree Entrance

The X-Lure MST replicates the cracklike harbourages which attract stored product crawling insects. It also boasts a 360 degree entrance ensuring easy access for insects, therefore increasing trapping potential.

2

Beetle-specific pheromones

The X-Lure MST has 3 different pheromones for key species such as the flour beetle, khapra beetle, and tobacco beetle.

Multiple Release Systems

To ensure that the attractants are released for the full 6-8 weeks, the XLure MST has four different release systems for each attractant.

3

4

Two Specialist Food Lures

The X-Lure MST has not just one food attractant, but two. It offers the insects the special 'Carob Jam' lure developed by the Central Science Laboratories in York, plus Wheat Germ Oil.

X-Lure MST is specially designed to attract and trap the following beetles:

● Biscuit Beetle ● Tobacco Beetle ● Flour Beetle ● Merchant Beetle ● Saw Toothed Grain Beetle ● Khapra Beetle ● Lesser Grain Borer ● Rice, Grain, and Maize Weevils

Peel the foil cover from the lure cartridge

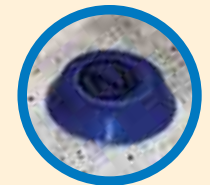

Push the lure cartridge onto the base of the trap

Place the trap in position (it works even on the most dusty surfaces)

Remove and inspect within 8 weeks. Replace with new lure cartridge

The XLure MST can attract and trap stored products crawling insects wherever they are suspected:

In Domestic Properties where food is stored. In Retail stores that handle dried food (i.e pet stores) In food factories, particularly where raw materials are stored, and any other premises which are prone to infestation from stored product beetles. The XLure is supplied in handy sized kits, comprising 5 reusable Traps, together with 5 Lure cartridges.
