

GLUE TWIN

GLUE TRAP FOR MICE AND CRAWLING INSECTS

TECHNICAL
DATA SHEET

TARGET PESTS

House mouse
(Mus musculus domesticus)

Crawling insects

MAIN FEATURES

Material: cardboard and scented adhesive

Dimensions: L 254 x W 100 mm

DESCRIPTION

GLUE TWIN is an adhesive cardboard trap designed for monitoring and capturing mice and crawling insects (such as cockroaches, silverfish, etc.), without the use of environmentally hazardous toxic substances. The special glue used maintains its characteristics even at low temperatures, does not dry out, and does not drip, ensuring effectiveness in any environmental condition. Food-grade aromas, free of allergens and compliant with BRC/IFS guidelines, are blended into the glue. Mixing the aroma directly into the glue ensures a uniformly attractive adhesive surface, maximizing the trap's enticing capacity.

GLUE TWIN can be used in various ways:

- Alone, in an open configuration or closed as a tunnel/house.
- Inside multi-catch devices such as Twin Mouse (code 3021) and Twin Plast (code 8118).
- Inside safety dispensers and control stations like Duo Control Station (code 8038-8060-8097-8387), Alpha (code 8002), Beta 2 (code 8159), Hard Rat Inox (code 7081), EVO Control Station (code 7500 and 7501).

HOW TO USE

Place the trap correctly along the rodent's usual paths, which can be identified through the detection of droppings, hairs, burrows, oily traces, and footprints. Close the trap in dusty environments to preserve its adhesive capabilities. If used inside monitoring and capturing devices, position the plate inside the device with the adhesive surface facing upward.

FIELDS OF USE

Ideal for use in all those contexts where chemical preparations cannot be used, such as food companies, pharmaceutical industries, agricultural farms, places frequented by children, and other animals. Place near doors and cracks, lofts, channels, electrical panels, warehouses, technical rooms, garages, basements, workshops, and along the perimeters of the areas to be disinfested.
